Course Goals

Primary Goal

To develop more effective and efficient writing skills.

Secondary Goal

To make significant progress on your manuscript.

What you'll need

"You must be ready to start writing a scientific manuscript the first week of the term. What does "be ready" mean? That's for you and your advisor(s) to decide. That said, being ready does not mean being 100% done with your analyses or having all your final figures drafted. (A key lesson of the course is that writing can and should start much earlier than that.) However, you do need to be far enough along to know what your paper's main story arc and primary message will be."

Core Principles

1. Being a scientist is being a writer
2. Productivity is designed, not discovered
3. Structure supercedes prose
4. Separate drafting from revising
5. Write for your readers
6. High-quality writing emerges from high-quality workflows
7. Literature is managed systematically
8. Collaboration is communication
9. Open science and reproducibility beget efficiency

We're all learning...

Be kind to yourself
Support each other

Integrity

Doing the right thing, even when no one is watching.

Let's get started!
